**PAPER**

A personalized experience for every student

Paper's Learner Profile is a powerful tool that encourages students to share their interests and strengths, set personalized academic goals, and begin to take ownership of their learning. Teachers can also review this information so they can get to know their students and customize instruction. The result? A more tailored, personalized, and engaging experience for everyone.

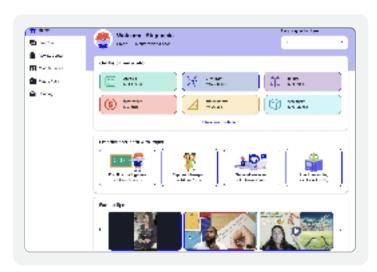

An in-depth onboarding experience

Students begin their Paper™ journeys with a short quiz where they identify some of their personal interests (such as painting or swimming) and share their comfort levels across different academic subjects.

Personalized profiles

Students can further customize their profiles by writing brief bios, creating short- and long-term goals, choosing their avatars, and updating any information they provided earlier in the onboarding experience (if needed).

Custom practice and learning opportunities

Students have a personalized section filled with grade-specific content on their Paper dashboards—think educational videos and practice problems. By accessing this content, they get valuable opportunities to solidify their knowledge and practice concepts.

Continuous evolution

The Learner Profile is flexible: It's designed to evolve with each student as they progress through their academic journey, from elementary school all the way to high school graduation.

Actionable data for teachers

The Teacher Dashboard is a great tool for educators who want meaningful insight into their students' strengths, weaknesses, and interests - both for individual students and the class as a whole.
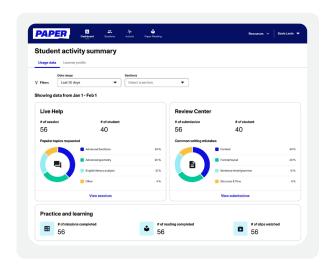

Usage Data

- Discover how often students seek live tutoring sessions and for which subjects.
- Identify which concepts students are struggling most with.
- Spot common writing mistakes.
- Monitor completed independent math and ELA practice problems.
- Track the number of completed reading sessions.

Learner Profile Data

- Get to know your students' individual goals and interests.
- Gauge their confidence levels in various subjects.
- Use these insights to inform your teaching and support.

Unlock the Potential of Classroom Data

- Use the high-level snapshot of learning activities within a specific time frame for managing in-class activities such as bell ringers, test corrections, and contests.
- Use Live Help and Review Center learning trends as a baseline to pinpoint where students may be struggling.
- Drill down into Live Help sessions for detailed tutor feedback and qualitative insights without sifting through full transcripts.
- Use Learner Profile data to create personal activities that align to students interests and goals.
