

Ideas for using Paper™ at home

There are many different ways students can use Paper to achieve academically! Start by having your student **log in to Paper**. Then explore the following ideas for using Paper at home.

1 Unsure of how to start a conversation with a tutor?

Students' first conversation with a Paper tutor will be a new, but exciting experience! If they are not sure how to begin, they can use these **Student Sentence Starters**. Here they can explore different ways to phrase their questions and get their tutoring session going.

2 Missed assignments due to an absence?

No need to fall behind! Whenever students have to miss school, they can always count on Paper tutors to assist them in completing homework packets or explain concepts they might have missed while being absent. Students can let tutors know they are working on a topic they missed at school, and the tutors will provide explanations to prevent students from feeling "lost" once they return to the classroom.

3 Need to practice for a quiz or want to review previous quiz/test questions?

Paper tutors are here to help students prep for upcoming quizzes/tests for any subject. Students can bring review questions to a Live Help session and practice to help them remember and get comfortable with problems they might see on the test. If they are working on correcting previous quizzes/test questions, tutors will help them identify what steps they got wrong and explain the correct way to solve the problem.

4 Stuck on a single problem or question?

Whether there are questions on the first or last step of a problem, students can work in a Live Help session to get to the answer. Students can let tutors know they need help getting started. If they have already tried to find a solution, they can share the problem with a tutor by uploading a picture and explaining how they got to the answer to check their understanding.

5 Seeking support with math skills?

Paper Math has got your back! Students can find Paper Math in their student dashboard to work on practice problems and build on important math skills.

6 Want to improve your study habits?

Knowing how to study can set students up for success. Students can start Live Help sessions for a particular subject and let tutors know what topic they are studying. Tutors can provide tips on how to stay organized, how to memorize terms, how to create flashcards, and other study skills.

7 Brainstorm ideas and get revisions for your upcoming writing assignment.

Writing assignments don't have to be daunting! Students can start Live Help sessions to brainstorm ideas or create outlines for any of their writing assignments with a tutor. If they already have a first draft ready, they can upload their work to Review Center to get feedback on their assignment.

8 No homework? No problem! Here are some ways you can continue learning and growing with Paper.

Prompt of the Day

Students can ask tutors for the Prompt of the day and tutors will give them a learning activity they can complete together.

PaperLive

Students can register for fun, educational, and interactive shows where they can explore a variety of exciting topics after school hours. PaperLive is accessible in the student dashboard.
